

Auto-Fill

Battery Watering System

Used conscientiously in an overall battery maintenance program, the Auto-Fill Battery Watering System from NSS® Enterprises, Inc. will extend battery life and reduce machine downtime.

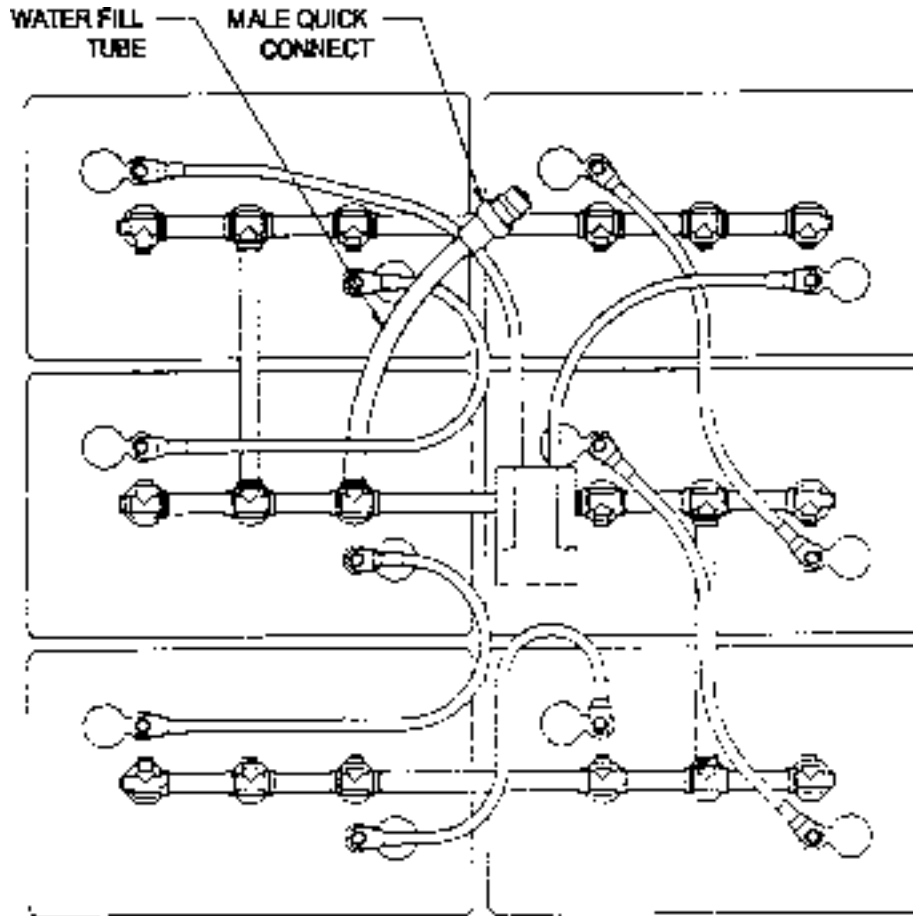

- Using the Auto-Fill is the safe, easy way to insure batteries are filled quickly to the correct fluid level every time. After installation of the Auto-Fill on the battery pack is complete, filling the batteries is as easy as connecting it to a distilled water source, connecting the fill hose to the Auto-Fill, and squeezing the prime bulb until the battery cells are filled with water. Once the prime bulb becomes firm, all cells are full.
- There is no need for maintenance personnel to peer into dark battery compartments, trying to judge the correct fluid level as they add water.
- The Auto-Fill prevents too much water from being added — too much water can cause caustic spills and corrosion damage to batteries and machine. Insufficient water in the batteries can lead to damage and expensive battery replacements.
- The Auto-Fill is currently available for all Champ and Wrangler 27/33 models with Crown 6V. battery packs with bayonet-style battery caps.

AUTO-FILL Installation Diagram

Once the Auto-Fill is completely installed on an NSS machine's battery pack, this hose (connected at one end to a distilled water supply and the other end to the Auto-Fill connector) makes it safe, easy and quick to fill the batteries to their correct fluid level every time.
