

# **AUTO-FILL**

## **Battery Watering System**

Used conscientiously in an overall battery maintenance program, the **Auto-Fill** Battery Watering System from NSS® Enterprises, Inc. will extend battery life and reduce machine downtime.

Using the **Auto-Fill** is the safe, easy way to insure batteries are filled quickly to the correct fluid level every time. After installation of the **Auto-Fill** on the battery pack is complete, filling the batteries is as easy as connecting it to a water source (faucet, hose, de-ionized water source, etc.), turning on the water and waiting 15 seconds for the **Auto-Fill** to do its job. There is no need for maintenance personnel to peer into dark battery compartments, trying to judge the correct fluid level as they add water. The **Auto-Fill** prevents too much water from being added — too much water can cause caustic spills and corrosion damage to batteries and machine. Insufficient water in the batteries can lead to damage and expensive battery replacements.

The **Auto-Fill** is currently available for all Champ and Wrangler 27/33 models with Crown 6V. battery packs with bayonet-style battery caps.

# AUTO-FILL Installation Diagram

Once the Auto-Fill is completely installed on an NSS machine's battery pack, this hose (connected at one end to a water supply and the other end to the Auto-Fill connector) makes it safe, easy and quick to fill the batteries to their correct fluid level every time.
