

Vacuum Filtration

NSS carpet vacuums rely on top quality vacuum bags to capture dirt and keep it where it belongs. We use the best filter media available to trap dirt, dust and pollen down to 0.3 microns for better indoor air quality.

The filter bag is the best line of defense against inefficient operation. There are many manufacturers of aftermarket filter bags that fit NSS products. Independent third party testing has shown that many of these bags are not made to the same standards as genuine NSS filter bags.

Poor vacuum bag performance can lead to a number of problems down the road:

- Decreased indoor air quality
- Increased dust on above-the-floor surfaces
- Premature consumption of secondary filters
- Premature consumption of HEPA filters

Less expensive filter bags may seem like a bargain, however, please remember that there may be undesirable consequences.

The only way to ensure proper performance and long life of your vacuum cleaner is to always use genuine NSS filter bags.
