

eForce™ Burnisher

Battery-Powered Ride-On

Feature

Benefit

Ride-On Productivity

The eForce™ Burnisher features the best burnishing technology in the industry combined with the superior productivity of a riding platform.

Joystick Control

Patent-pending joystick control makes the eForce Burnisher simple to control and less fatiguing to drive.

Touch Pad Control

The touch pad control panel lets the operator work all of the eForce Burnisher controls from one screen.

Front Mounted Burnishing Head

The front mounted burnishing pad allows the eForce Burnisher to get into corners where other rider burnishers cannot. And the open design permits excellent visibility of the work area.

Zero Turning Radius

The zero turning radius design allows the burnisher to be used up against the wall and in tight areas.

Digital Training Manual

A training manual is built into the touch screen control panel. In addition, all important touch-points are identified with decals or our signature green color.

Flip-Up Burnishing Head

Hinged 90° flip-up burnishing head allows for compact storage and standing pad changes.

Multiple Pad Pressures & Drive Speeds

There are three pad pressures and drive speed settings to fine tune your burnishing process.

Supervisor Mode

For even more control, there is a “supervisor mode” which allows you to select which drive speeds and pad pressures your operators can use.

Vac-Trac Dust Control

The Vac-Trac Dust Control System collects floor finish and pad dust in a filter bag on the head for enhanced Indoor Air Quality.

Floating Burnishing Head

The floating burnishing head allows more uniform burnishing on uneven floors.
