

# eForce<sup>®</sup> Scrubber

## *Battery-Powered Ride-On*

### Feature

### Benefit

#### **Ride-On Productivity**

The eForce<sup>®</sup> Scrubber features the best cleaning technology in the industry combined with the superior productivity of a riding platform.

#### **Easy To Use**

NSS's patented joystick control makes the eForce Scrubber simple to control and less fatiguing to drive. The eForce scrubber controls like no other scrubber, giving the operator pinpoint controls and the ability to turn on a dime. Our joystick control system is the largest advance in riding cleaning machines since the creation of the category.

#### **Easy To Operate**

The touch screen control panel lets the operator work all of the eForce Scrubber controls from one screen. Dial in exactly what you need for your application. Three solution flow rates, three pad pressures, two pad speeds and two vacuum speeds give you the flexibility you need to maximize your productivity and run time.

#### **Conservation Mode**

With one button press, the eForce Scrubber is set to the lowest water and power settings. Perfect for cleaning areas where quiet operation and water conservation is needed.

#### **Supervisor Mode**

For even more control, there is a "supervisor mode" which allows you to select which machine settings your operators can use.

#### **Zero Turning Radius**

The zero turn radius design allows the scrubber to be used up against the wall and in tight areas.

#### **Digital Training Manual**

A training manual is built into the touch screen control panel.

#### **Interior Machine Access**

The upper body opens fully allowing ample space for cleaning out the recovery tank and the debris filter, which helps prevent recovery tank clogs. Wide-open access to the battery compartment makes filling batteries simple.
